aids to acute medicine pdf

Human immunodeficiency virus infection and acquired immune deficiency syndrome (HIV/AIDS) is a spectrum of conditions caused by infection with the human immunodeficiency virus (HIV). Following initial infection, a person may not notice any symptoms or may experience a brief period of influenza-like illness. Typically, this is followed by a prolonged period with no symptoms.

HIV/AIDS - Wikipedia

The Department of Medicine at IU School of Medicine consists of 10 divisions that encompass an array of internal medicine subspecialties. An accomplished team of physician educators trains highly skilled, compassionate generalists and specialists to be the future leaders in clinical practice, research and academia.

Many consultant physicians practice general internal medicine in addition to their medical specialty, and many patients are cared for under the umbrella of general internal medicine. These include the full range of adults admitted as emergencies with acute medical problems, ranging from the young fit person with a severe acute illness, to the frail elderly with multiple disorders.
