For a solid to melt, heat is required to raise its temperature to the melting point. However, further heat needs to be supplied for the melting to take place: this is called the heat of fusion, and is an example of latent heat.. From a thermodynamics point of view, at the melting point the change in Gibbs free energy ( $\Delta G$ ) of the material is zero, but the enthalpy (H) and the entropy (S) of ...

Transport theory provides an alternate interpretation of viscosity in terms of momentum transport: viscosity is the material property which characterizes momentum transport within a fluid, just as thermal conductivity characterizes heat transport, and (mass) diffusivity characterizes mass transport. To see this, note that in Newton's law of viscosity,  $\tau = \mu \frac{dv}{dy}$ , the shear stress has units ...

Viskositet blir definert som et fluids (en gass eller en væskes) egenskap ved hvordan motsetningen av de forskjellige lag i fluidet beveger seg i forskjellige hastigheter. Det vil si hvor tykkflytende væsken er. Væskens motstand virker da som en spenning i strømmingen mellom lag som beveger seg i forhold til hverandre.
