toward linear algebra. Working with curved lines and curved surfaces, the first step is always to linearize. Replace the curve by its tangent line, the surface by a plane, and the problem becomes linear. The power of this subject comes when you have ten variables, or 1000 variables, instead of two.

Applications, and Computers. The point of view taken here, that linear algebra is about vector spaces and linear maps, is not taken to the exclusion of all others. Applications and the role of the computer are interesting, important, and vital aspects of the subject. Consequently, every chapter closes with a few application or computer-related ...
